

Dust treatment wall mod.

IWATER

The dust treatment walls mod. IWATER solves the problems connected with the powder produced by the working of marble and granite. Its functioning is very easy: the air full of dust is taken in by internal fans and then it is filtered through thin water surfaces; the dust gets heavy because of the absorbed water and then falls into the basin full of water placed underneath, blasting completely.

Model	Dimensions	Weight Kg	Fan N°	HP	M ³ /hour	Efficiency %	Noise
IWater 4 mt	4000x1000xh2350	415	2	8	22.000	98,3	69dB
IWater 3 mt	3000x1000x2350	320	1	4.2	11.000	98,3	69dB
